

*MARK DOLECHEK, PE – GARVER*

Mark is the Kansas Water Team Lead for Garver and has 13 years of professional engineering experience in both Kansas and Nebraska. He obtained his degree in Civil Engineering from Kansas State University. He has spent the last six and a half years working as a consultant on design for both municipal and private clients. Prior to 2016, Mark worked for the City of Norfolk, Nebraska, as the City Engineer, so he has experience both on the public and private side. His project experience includes study and design for consolidation of multiple lift stations, developing water and wastewater master plans, as well as various water main and sewer main replacements. Currently he is involved in some very large projects including rerouting an existing 78" diameter sanitary sewer from underneath the interstate in the heart of Wichita, serving as the owner's representative for the Northwest Wichita Water Treatment Facility and the owner's advisor for the Wichita Biological Nutrient Removal Program.
